

LS Opportunity Fund

Long Short Advisors, LLC launched the LS Opportunity Fund (LSOFX, the "Fund") to offer its clients access to investment strategies through a mutual fund format that provides daily liquidity, low initial investment minimums, more portfolio transparency, lower fees, and access to what we believe are some of the best investment managers in the business. Prospector Partners, LLC, the Fund's "Sub-Advisor," has been operating a traditional hedge fund with a similar investment objective since 1997.

Investment Strategy

The Fund aims to identify compelling long/short investment opportunities through a bottom-up stock selection process based on in-depth analysis of business and financial fundamentals. Through extensive research, implementation of risk management, diversification and limited use of leverage, the LS Opportunity Fund strives to do what a successful investment manager should to achieve capital growth during periods of rising or stable stock prices and downside risk mitigation during periods of declining stock prices.

Risk Characteristics – 5-year

As of 6/30/2025

Portfolio Fit

Investors can use the LS Opportunity Fund as a core long-short equity holding due to its potential ability to not only protect in down equity markets but to stay “in the game” in up markets. Unlike other dynamic (variable net exposure) or market timing strategies, the LS Opportunity Fund is primarily focused on selecting individual companies to either go long or short within a target net exposure range of 50%-80%. In addition, when analyzing a potential investment, analysis and decisions are grounded in a credit-based, bottom-up fundamental process which begins with the balance sheet and cash flow statement as opposed to an income statement or valuation only driven approach. Constructed both long and short in a value-based, all-cap approach, the strategy minimizes growth/value basis risk and consequently experiences lower volatility relative to its net exposure than most comparable strategies which has historically resulted in positive alpha and positive risk-adjusted numbers.

2025 Returns

Important Risk Information

Investment in shares of a long/short equity fund have the potential for significant risk and volatility. A short equity strategy can diminish returns in a rising market as well as having the potential for unlimited losses. These types of funds typically have a high portfolio turnover that could increase transaction costs and cause short-term capital gains to be realized. The stocks in the Fund's portfolio may decline in value or not increase in value when the stock market in general is increasing or decreasing in value and you could lose money. The Fund may lose money due to fluctuations within the stock market which may be unrelated to individual issuers and could not have been predicted. The price of the securities which the Fund holds may change unpredictably and due to local, regional, international, or global events. In the case of a general market downturn, multiple asset classes, or the entire market, may be negatively affected for an extended and unknown amount of time.

Risk Statistic Definitions:

Standard Deviation measures the volatility of the Fund's returns. **Beta** measures the Fund's sensitivity to market movements. **Sharpe Ratio** uses the Fund's standard deviation and average excess return over the risk-free rate to determine reward per unit of risk. **R-squared** represents the percentage of the portfolio's movements that can be explained by general market movements. **Upside/Downside Capture Ratio** measures a manager's ability to generate an excess return above the benchmark return in up markets and retain more of the excess return in down markets. Risk statistics are relative to the S&P 500. **Batting Average** is a statistical measure used to evaluate an investment manager's ability to meet or beat their index. **Omega** is a relative measure of the likelihood of achieving a given return. **Max Drawdown** is the peak-to-trough decline during a specific recorded period of an investment. **Gross Exposure** is the sum of the absolute values of the fund's long and short exposures.

Net Exposure is the fund's total long exposure less the fund's total short exposure.

The Expense Ratio, Gross of Any Fee Waivers or Expense Reimbursements, is 2.75%. The Expense Ratio, Net of Fee Waivers and Expense Reimbursements (contractual through 9/30/2025), is 2.70%. The Expense Cap is 1.95%. The Adviser has contractually agreed to waive or limit its fees to 1.95% and to assume other expenses of the Fund until September 30, 2025, so that the ratio of total annual operating expenses (not including interest, taxes, brokerage commissions, other expenditures which are capitalized in accordance with generally accepted accounting principles, other extraordinary expenses not incurred in the ordinary course of business, dividend expenses on short sales, expenses incurred under a Rule 12b-1 plan, acquired fund fees and expenses and expenses that the Fund incurred but did not actually pay because of an expense offset arrangement) does not exceed 1.95%.

Prospector Partners, LLC assumed investment management duties on 05-28-2015 and was formally approved by shareholders on 09-17-2015.

Disclosure

Morningstar US Long Short Fund Category – Long-short portfolios hold sizable stakes in both long and short positions. Some funds that fall into this category are market neutral – dividing their exposure equally between long and short positions in an attempt to earn a modest return that is not tied to the market's fortunes. Other positions that are not market neutral will shift their exposure to long and short positions depending upon their macro outlook or the opportunities they uncover through bottom-up research.
